WINTER TREE CARE

Happy New Year!

Are you considering tree work this year, but waiting for the warmer months? Why wait! This is a great time to take care of your trees. Here's why:

Trees are dormant. They are taking a break and their reserves are being stored in their root system; trimming now puts **the least amount of stress** on your tree. Plus it's a great time to check out the tree for structural problems.

Trees cannot be infected or attacked. Pests and diseases are not around. Some trees such as oaks and American elms should only be pruned when they are dormant. It is also a great time to thin ornamental trees that have fungal leaf problems. Plus the tree begins to heal with the start of spring minimizing the time it takes for a wound to heal.

Minimize impact to your garden. Do you have an ornate garden that lies beneath the tree you're looking to have trimmed? Why have work done to your tree after you've planted all those fragile annuals or when your perennials are growing! The more room the crew has to work the quicker they can get the job done; this translates into a cheaper price for you.

Save Money. Unfortunately for us, most of our customers don't think about their trees until they are leafed out and actively growing. We literally go from idle to full throttle overnight. If you stay ahead of the pack we can offer better pricing.

Special points of interest:

- * Winter prices can be extremely competitive!
- * If you have had trouble in the past growing grass, thin your trees now to open the canopy up for more light onto your lawn.
- * Consultations, assessments and estimates are free in winter months!

The Spring Tree care newsletter will be sent at the end of February 2011.

Call today if you have questions or want to arrange a time to meet!

Thanks for being great customers! We hope to continue assisting you with all your tree and shrub needs!

*If you do not want to receive our newsletter, please call or email us to remove you from the list.
